| <ul style="list-style-type: none">• Wiped and set up thousands of Windows laptops and workstations for new hires and replacements• Readied workstations and branch hardware for shipping with FedEx and UPS• Basic Software and Hardware troubleshooting over phone with users• Performed repairs on hundreds of workstations using Dell Certifications | |

Technical Skills

Languages: Python, Java, Golang, JavaScript, Bash, Batch, Powershell, C#, and more

Frameworks: FastAPI, FastMCP, Django, Typer, Quarkus, React, Vue, Angular, Svelte, and more

Tools: Ansible, Git, GitLab CI, GitHub Actions, Podman, Buildah, Skopeo, Docker, Helm, Kustomize, and more

Platforms: Ansible Automation Platform, GitLab, GitHub, Azure, AWS, Terraform Enterprise/Cloud, Hashicorp Vault, OpenShift/Kubernetes, Elasticsearch, OpenSearch, ServiceNow, PostgreSQL, Event Driven Ansible, and more

Education

BS Vincennes University, Technology Aug 2012 – May 2014

AS Vincennes University, Network Security and Wireless Specialty Aug 2010 – May 2012

Projects

Deployed and Automated Ansible Automation Platform: Migrated Ansible Tower and Deployed Ansible Automation Platform on OpenShift and fully automated and scheduled configuration and backups of itself using Ansible and GitHub Actions

Developed an Automated Ansible Execution/Decision Environment Builder: To avoid having users build and deploy their own unique Execution/Decision Environments, used a GitHub Actions Runner on OpenShift to gate/build/deploy them

Architected MCP based AI Assistant for Apps and Infrastructure: Diagrammed and Presented project proposal for an MCP based AI Assistant for full and fast insights, tying it in with our alert system for fast Root Cause Analysis and Safe, Basic Fixes

Deployed OpenShift on Azure: Deployed OpenShift on Azure for cloud based scaling capabilities without purchasing additional hardware to achieve the same effect

Automated Virtual Machine Creation in vSphere: Migrated Virtual Machine creation from an old manual system to a fully automated Ansible system using ServiceNow as a front end

Migrating Branches to Cloud Services: Worked with various teams to remove the cost of aging equipment and operating systems in the branches. In addition, this bolstered our security and managability capabilities greatly

Created UI for Workstation and McAfee version monitoring: Created simple Django website with workstation remoting capabilities to monitor and report on system software and security

Automated Meltdown and Spectre BIOS Patch Distribution: Developed and deployed automated Meltdown and Spectre BIOS patching with rollout monitoring and safeguards
